

The graph displays the annual number of deaths from COVID-19 in the United States, categorized by age group. The x-axis represents the year from 1970 to 2020, with major ticks every 10 years. The y-axis represents the number of deaths, with a dashed black line indicating the baseline level. The three data series are: 65+ (red line), 18-64 (yellow line), and 0-17 (blue line). The 65+ series shows a sharp increase starting around 1995, peaking at approximately 1.2 million deaths in 2000, and then declining to around 0.2 million by 2020. The 18-64 series shows a significant peak of about 0.8 million deaths in 1995, followed by a decline to around 0.1 million by 2020. The 0-17 series remains consistently near the baseline throughout the entire period.
